Proper PCV Valve Selection for a High Performance Engine Build

In a high performance engine application, a stock valve may operate inefficiently or not at all Since little flow data exists, picking the correct valve for a modified engine can be difficult or impossible Our first instinct was to search for PCV flow data which could be cross referenced to part numbers or some type of engine recommendations

How to Set Your Timing for Peak Performance

Small block Chevys (and most other GM performance V8 engines) perform best when the total timing (full centrifugal advance plus the initial timing setting with vacuum advance disconnected) is all in by 2,500 \pm 2,800 rpm and is set to 36 \pm 38 degrees If you have an adjustable timing light, this is
