This open universe model provoked again an argument [2] and a counter-argument [3] among leading proposals for the initial condition of the wave function of the Universe Currently it is widely accepted that the very early Universe emerged quantum mechanically from a Euclidean regime into the Lorentzian regime of the present Universe

Physical grounds for causal perspectivalism.

The argument we make here is summarised as follows In closed classical and quantum systems, causal relations are irrelevant just as Russell has argued Russell's argument does not apply to open subsystems of the universe (with boundaries defined by good physical arguments) as open subsystems are described by irreversible dynamics

The phrase 'open question' does not appear in any of these passages, but it does appear a page later at the end of Section 14 Insofar as Principia Ethica is concerned, if there is anything that deserves to be called 'the Open Question Argument' in the book, it is to be found in these passages^{4 3} Four preliminary problems

Mackie on the problem of evil - University of Notre Dame

Free will, determinism, & indeterminism

van Inwagen provides an argument for this conclusion: the consequence argument The question of the compatibility of free will and determinism is then: can it ever be the case that choices A and B are open to you, despite the fact that the laws of nature (and the prior state of the universe) are consistent only

Premise 1: The universe began to exist Premise 2: Everything that begins to exist has a cause of its existence Conclusion: Therefore the universe has a cause of its existence The argument goes on to establish that the cause of the universe's existence counts as God What I want to focus on is the first premise of the argument There are
