Properties of Generalized Univariate Hypergeometric Functions

hyperbolic theory is well suited to deal with unimodular base q The theory of elliptic special functions, initiated by Frenkel and Turaev in [4], is currently in rapid devel-opment The starting point of our analysis is the definition of the various generalized hypergeometric functions as an explicit hypergeometric integral of elliptic, hyperbolic

Harmonic Function Theory - Axler

Throughout this book, all functions are assumed to be complex valued unless stated otherwise For k a positive integer, let C_k — denote the set of k times continuously differentiable functions on $;$ C_1 — is the set of functions that belong to C_k — for every k For $E \hat{=} \mathbb{R}^n$, we let $C—E$ — denote the set of continuous functions on E
