Granulation provides a complete and comprehensive introduction on the state-of-the-art of granulation and how it can be applied both in an academic context and from an industrial perspective. Coupling science and engineering practices it covers differing length scales from the sub-granule level through behaviour through single granules, to bulk granule behaviour and equipment design. W

special focus on a wide range of industrially relevant areas from fertilizer production, through to pharmaceuticals. Experimental data is complemented by mathematical modelling in this emerging field, allowing for a greater understanding of the basis of particle products and this important industry.

Four themes run through the book: 1. The Macro Scale processing for Granulation - including up to date descriptions of the methods used for granulation and how they come about and how to monitor - on-line these changes. 2. The Application of granulation from an industrial perspective, with current descriptive roles and how they are undertaken with relevance to industry, and effective properties. 3. Mechanistic descriptions of granulation and the different rate processes occurring within the granulator. This includes methods of modelling the process using Population - Balance Equations, and Multi-level Computational Fluid Dynamic Models. 4. The Micro Scale: Granules and Smaller, looking at single granules and their interactions and modelling, while also considering the structure of granules and their constituent liquid bridges.

* Covers a wide range of subjects and industrial applications * Provides an understanding of current issues for industry and academic environments * Allows the reader an understanding of the science behind engineered granulation processes

In this lexicon, Tal Ilan collects all the information on names of Jews in lands west of Palestine, in which Greek and Aramaic was spoken, and on the people who bore them between 330 BCE, a date which marks the Hellenistic conquest of East, and 650 CE, approximately the date of the Muslim conquest of East and the southern Mediterranean basin was conquered. The corpus includes names from literary sources, but those mentioned in

epigraphic and papyrological documents form the vast majority of the data. This lexicon is an onomasticon in as far as it is a collection of all the recorded names used by the Jews of the western Diaspora in the above-mentioned period. Tal Ilan discusses the provenance of the names and explains them etymologically given the many possible sources of influence for the names at that time. In addition, she shows the division between the use of biblical names and the use of Greek, Latin and other foreign names, and points out the most popular names. This is also a prosopography since Ilan analyzes the identity of the persons mentioned therein. The lexicon is accompanied by a lengthy and comprehensive introduction that scrutinizes the main trends in name giving current at the time. A large part of it is devoted to the question of how one can identify a Jew in a mostly non-Jewish society.
