Optoelectronic Technology and Lightwave Communications Systems Sep 09 2020 Ever since the invention of the transistor, semiconductor-based microelectronics has made a revolutionary impact on the information society, as evident from the widespread application of microprocessor-based technology in our modern society. The next wave of modern information technology, after transistors and microelectronics, is that of lasers and micro-optoelectronics. Optoelectronics, or optical electronics, based on lasers and related modern optical technology, has also become a very important field of science and technology in the past 20 years. Electronics or microelectronics deals with (micro)electronic devices and components for generation, transmission, and processing of electronic signals. In contrast, in optoelectronics we deal with optoelectronic devices and components for the generation, transmission, and processing of lightwave signals. It is the interaction of lightwaves (photons) with matter that shows the uniqueness of optoelectronic technology; optical absorption and scattering, optical gain and amplification, material and waveguide dispersion, nonlinear optical effects, etc., are very much dependent on the material's intrinsic properties and the lightwave propagation effects.

Indigenous Graphic Communication Systems Apr 04 2020 *Indigenous Graphic Communication Systems* challenges the adequacy of Western academic views on what writing is and explores how they can be expanded by analyzing the sophisticated graphic communication systems found in Central Mesoamerica and Andean South America. By examining case studies from across the Americas, the authors pursue an enhanced understanding of Native American graphic communication systems and how the study of graphic expression can provide insight into ancient cultures and societies, expressed in indigenous words. Focusing on examples from Central Mexico and the Andes, the authors explore the overlap among writing, graphic expression, and orality in indigenous societies, inviting reevaluation of the Western notion that writing exists only to record language (the spoken chain of speech) as well as accepted beliefs of Western alphabetized societies about the accuracy, durability, and unambiguous nature of their own alphabetized texts. The volume also addresses the rapidly growing field of semasiography and relocates it more productively as one of several underlying operating principles in graphic communication systems. *Indigenous Graphic Communication Systems* reports new results and insights into the meaning of the rich and varied content of indigenous American graphic expression and culture as well as into the societies and cultures that

produce them. It will be of great interest to Mesoamericanists, students, and scholars of anthropology, archaeology, art history, ancient writing systems, and comparative world history. The research for and publication of this book have been supported in part by the National Science Centre of Poland (decision no. NCN-KR-0011/122/13) and the Houston Museum of Natural Science. Contributors: Angélica Baena Ramírez, Christiane Clados, Danièle Dehouve, Stanisław Iwaniszewski, Michel R. Oudijk, Katarzyna Szoblik, Loïc Vauzelle, Gordon Whittaker, Janusz Z.
