This book is the fifth in the Mick Walker Racing Motorcycle series. It covers the Grand Prix Motorcycles from Japan. This book is an account of the companies and individuals, who have played a major part in the design and advancement of motorcycle frame (chassis) performance. These independent companies began to spring up in the early postwar years, when motorcycle racing began to take place again. Due to the lack of available factory machines and the urge to improve performance of the now aged equipment, riders began to build their own frames around whatever engines were available. Success brought recognition, and people were soon wanting to buy winning machines, so fledgling

companies began to spring up to satisfy the growing demand for custom chassis. Some of these companies soon began to grow, and others appeared in various European countries over the next few years. The state-of-the-art hand built frames were becoming a must for the discerning road bike rider, and so the independent motorcycle frame makers were beginning to put some designs into production, and a thriving business was beginning to emerge. In later years, with such a large choice of factory engines from around the world, the successful independent chassis manufacturers went from strength to strength and some are now producing highly prized road bikes, whilst building one-off machines as required. As the years have passed, one or two of the independent companies have disappeared, but in many cases their machines have become very collectable classics. The companies still thriving today, as well as producing modern machines with a wide range of engine options, are finding considerable business rebuilding and maintaining machines built in the earlier years. Some of the pioneer builders have become household names to the motorcycle fraternity, and those written about in this book include: Nico Bakker (The Netherlands), Bimota (Italy), Dresda Autos (United Kingdom), Egli (Switzerland), Harris Performance Products (United Kingdom), Hejira racing (United Kingdom), Magni (Italy), Maxton Engineering (United Kingdom), P&M Motorcycles (United Kingdom), Quasar (United Kingdom), Rickman UK (United Kingdom), Colin Seeley Racing (United Kingdom), Segale (Italy) and Spondon Engineering (United Kingdom). This book charts the history of

these innovative companies with full specifications for many chassis, and is extensively illustrated throughout. A must for any motorcycle enthusiast, and a valuable reference for the trade. Whether it be an entry level GT380, or a ground-breaking water-cooled GT750, this step-by-step full restoration guide covers it, from dismantling, sourcing parts, spraying and decals, to polishing, safe set-up and general maintenance. Even riding safely and storage are covered, making this a must-have guide for all Suzuki Triple enthusiasts. The automobile industry is evolving rapidly on a worldwide basis. [From back cover]. In 1985 Suzuki brought the technology from its championship-winning Grand Prix motorcycles to the street in the form of the groundbreaking GSX-R series. For decades the Japanese manufacturers had built sporting motorcycles that were all motor and very little else. For the complete package-bikes that handled as well on a racetrack as they handled in a straight-line drag race-riders had to purchase ultra expensive, ultra exotic machinery from European manufacturers. In one lightning strike Suzuki changed that. Suzuki GSX-R tells the complete story of these remarkable bikes. Popular Science gives our readers the information and tools to improve their technology and their world.
