How did a major corporation manage to turn itself around while Wall Street and others continued to predict its slow death? The answer may surprise you, and it provides a model for corporate transformation for any company or government agency operating in a world of accelerating change. The company is General Motors, and this book tells how it was able to change the way important decisions were made, leading to resurgence in business across its many product lines. At the beginning of the 1990s, GM was perceived by nearly everyone as falling behind its competitors at an alarming rate. By the beginning of the twenty-first century, though, the company had come storming back with successful new automobiles and new business concepts that captured new markets, while simultaneously holding on to many of its existing customers. What GM did is not just the story of a single automaker, but rather a compelling insight into an approach for any business organization that is faced with the need for a true transformation. As many companies have discovered, efforts at transformation too often fail. GM's successful transformation illustrates the importance of management's ability to change its mindset and make the tough decisions that revitalize business with bold new products and business concepts. At the heart of successful transformation is the imagination, courage and leadership required to visualize the kind of company an organization wants to become and then work toward that goal. With the destination set and understood by those who will need to implement the changes, decision-makers find it less difficult to overcome impediments to achieving their goal while finding creative ways of doing what may seem impossible. The lessons from GM's turnaround can help any business organization change and keep pace with today's turbulent marketplace. EBONY is the flagship magazine of Johnson Publishing. Founded in 1945 by John H. Johnson, it still maintains the highest global circulation of any African American-focused magazine. As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz -- rich cars, poor quality. There's only one Saturn you should buy. Toyota -- enough apologies: "when you mess up, 'fess up." Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. The weekly source of African American political and entertainment news. EBONY is the flagship magazine of Johnson Publishing. Founded in 1945 by John H. Johnson, it still maintains the highest global circulation of any African American-focused magazine. This book proposes a re-interpretation of Article 2(4) of the Charter of

the United Nations to read, or at least include, respect for the inviolability of State territory. While States purport to obey the prohibition of the Use of Force, they frequently engage in activities that could undermine international peace and security. In this book the author argues that State practice, *opinio juris*, as well as contentious and advisory opinions of the International Court of Justice, have promoted the first limb of Article 2(4). Although wars between States have decreased, the maintenance of international peace and security remains a mirage, as shown by the increase in intra- and inter-State conflicts across the world. The author seeks to initiate a rethinking of the provision of Article 2(4), which the International Court of Justice has described as the cornerstone of the United Nations. The author argues that the time is ripe for States to embrace an evolutive interpretation of Article 2(4) to mean respect, as opposed to the traditional view of the threat, or the use, of force. He also evaluates the discourse regarding territorial jurisdiction in cyberspace and argues that the efforts made by the international community to apply Article 2(4) to cyberspace suggest that the article is a flexible and live instrument that should be adjusted to address the circumstances that endanger international peace and security. This book will engineer a serious debate regarding the scope of Article 2(4), which before now has always been limited to the threat or use of force. As a result, it will be of interest to academics and students of public international law, as well as diplomats and policymakers. An intelligent, charming collection of vignettes about life in Central Nevada, an area far too seldom written about: its early inhabitants, historical insights, lore of the past, and ranching tales. Phil Edmonston, Canada's automotive "Dr. Phil," pulls no punches. He says there's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar and an auto industry offering reduced prices, more cash rebates, low financing rates, bargain leases, and free auto maintenance programs. In this all-new guide he says: Audis are beautiful to behold but hell to own (biodegradable transmissions, "rodent snack" wiring, and mind-boggling depreciation) Many 2011-12 automobiles have "chin-to-chest head restraints, blinding dash reflections, and dash gauges that can't be seen in sunlight, not to mention painful wind-tunnel roar if the rear windows are opened while underway) Ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers) GM's 2012 Volt electric car is a mixture of hype and hypocrisy from the car company that "killed" its own electric car more than a decade ago) You can save \$2,000 by cutting freight fees and "administrative" charges) Diesel annual urea fill-up scams can cost you \$300, including an \$80 "handling" charge for \$25 worth of urea) Lemon-Aid's 2011-12 Endangered Species List: the Chinese Volvo, the Indian Jaguar and Land Rover, the Mercedes-Benz Smart Car, Mitsubishi, and Suzuki) A mildly humorous journey through the real, and often financially disappointing world of buying the perfect used car, a full color photo visual guide intended to enlighten prospective buyer's, to the many pitfalls lying in wait for so many. The pre-purchase visual guide is a series of actual full color photograph's, (66) depicting various conditions of neglect, or seemingly minor problem, which left unattended has lead to a catastrophic failure. You're then shown in photo detail along with full explanation, consequences resulting from the inaction to resolve that minor problem. Professional advice as to what is deemed to be good, needs attention, or directs you to look elsewhere. These are the vehicles to be avoided, remember, you are searching for the "almost new, used vehicle". Situated on idyllic Taylors Island, off the coast of Maryland's Chesapeake Bay, Loblolly House inaugurates a new, more efficient way of building. Through the use of state-of-the-art building information modeling, the architects were able to streamline the design-

build process. This is a manual for the componentized prefab. "Total car care is the most complete, step-by-step automotive repair manual you'll ever use. All repair procedures are supported by detailed specifications, exploded views, and photographs"--Page [4] cover. This book steers buyers through the the confusion and anxiety of new and used vehicle purchases unlike any other car-and-truck book on the market. "Dr. Phil," Canada's best-known automotive expert for more than forty-five years, pulls no punches. With the increasing popularity of GM's LS-series engine family, many enthusiasts are ready to rebuild. The first of its kind, *How to Rebuild GM LS-Series Engines*, tells you exactly how to do that. The book explains variations between the various LS-series engines and elaborates up on the features that make this engine family such an excellent design. As with all Workbench titles, this book details and highlights special components, tools, chemicals, and other accessories needed to get the job done right, the first time. Appendices are packed full of valuable reference information, and the book includes a Work-Along Sheet to help you record vital statistics and measurements along the way. This compendium of everything that's new in cars and trucks is packed with feedback from Canadian drivers, insider tips, internal service bulletins, and confidential memos to help the consumer select what's safe, reliable, and fuel-frugal. Each Haynes manual provides specific and detailed instructions for performing everything from basic maintenance and troubleshooting to a complete overhaul of the machine, in this case the Polaris ATVs 250-800cc, model years 1998 through 2007. Do-it-yourselfers will find this service and repair manual more comprehensive than the factory manual, making it an indispensable part of their tool box. A typical Haynes manual covers: general information; troubleshooting; lubrication and routine maintenance; engine top end; engine lower end; primary drive, clutch and external shift mechanism; transmission and internal shift mechanism; engine management system; electrical system; wheels, tires and drivebelt; front suspension and steering; rear suspension; brakes; body, and color wiring diagrams. An index makes the manual easy to navigate.

The Poor Relation hotel is the toast of London and its owners are preparing to sell up and retire - but one last romantic adventure awaits them! Driven into hiding at the hotel by a tyrannous father and a rich but wizened suitor, Lady Jane Fremney attempts to end her life. The poor relations save the young lady and determine to improve her lot in life by bringing her out for the Season. All the young bucks call on Jane, among them the handsome but racy Comte de Mornay, an exile from Napoleon's France who has broken many a heart and so far eluded matrimony. Jane is quite adamant he is unsuitable for her - but when his life is threatened by an assassin's pistol, it is up to her to help him escape from danger... and into l'amour! Good old Dad and his good old Dad's car. As solid and dependable as the man himself, if a little less balding, Dad's car was almost a member of the family, whisking you to exciting days out, or just to visit boring relatives in distant parts of the country to the chant of 'are we nearly there yet?' Like the man behind the wheel, Dad's car made you feel safe and secure, because it was as reassuring and sensible as he was. Maybe in an idle moment Dad dreamt of driving something rakish and fast, just like in idle moments he dreamt that your Mum was Twiggy, but the demands of family life meant soft tops, hard suspension and anything even remotely sporty were off the cards. Even anything less than four doors would have been wildly hedonistic. But although the family car may not have been the very essence of rock 'n' roll, Dad was proud of it. Spanning the 1950s to the '80s, this is a celebration of the heyday of the Dad car. From much loved family workhorses like the Ford Cortina and Vauxhall Viva to the rakish excitement and playground kudos of the Rover 3500 and Citroen CX, all the great Dad cars are here. Reflecting a time before people carriers and lifestyle off roaders, when the nearest thing to an airbag was hiding behind your

fat brother, this is a celebration of simple, honest cars that were as flawed and as loveable as your Dad himself. Steers buyers through the the confusion and anxiety of new and used vehicle purchases like no other car-and-truck book on the market. "Dr. Phil," along with George Iny and the Editors of the Automobile Protection Association, pull no punches. Plug-in electric vehicles are coming. Major automakers plan to commercialize their first models soon, while Israel and Denmark have ambitious plans to electrify large portions of their vehicle fleets. No technology has greater potential to end the United States' crippling dependence on oil, which leaves the nation vulnerable to price shocks, supply disruptions, environmental degradation, and national security threats including terrorism. What does the future hold for this critical technology, and what should the U.S. government do to promote it? Hybrid vehicles now number more than one million on America's roads, and they are in high demand from consumers. The next major technological step is the plug-in electric vehicle. It combines an internal combustion engine and electric motor, just as hybrids do. But unlike their precursors, PEVs can be recharged from standard electric outlets, meaning the vehicles would no longer be dependent on oil. Widespread growth in the use of PEVs would dramatically reduce oil dependence, cut driving costs and reduce pollution from vehicles. National security would be enhanced, as reduced oil dependence decreases the leverage and resources of petroleum exporters. Brookings fellow David Sandalow heads up an authoritative team of experts including former government officials, private-sector analysts, academic experts, and nongovernmental advocates. Together they explain the current landscape for PEVs: the technology, the economics, and the implications for national security and the environment. They examine how the national interest could be served by federal promotion and investment in PEVs. For example, can tax or procurement policy advance the cause of PEVs? Should the public sector contribute to greater research and development? Should the government insist on PEVs to replenish its huge fleet of official vehicles? Plug-in electric vehicles are coming. But how soon, in what numbers, and to what effect? Federal policies in the years ahead will go a long way toward answering those questions. David Sandalow and his colleagues examine what could be done in that regard, as well as what should be done. "The rhythmic, onomatopoeic text dances across exuberant watercolors with lots of movement. This celebration of a child's agency in choosing a means of artistic expression strikes just the right note." --Kirkus "A delightful offering for reading aloud, especially during music-themed storytimes." -- School Library Journal From New York Times bestselling author Chris Barton and new illustrator Louis Thomas comes a fun, rhythmic picture book about finding the music that is perfect for you! A boy who loves to make noise gets to pick only one instrument (at his parents urging) in a music store, but there is too much to choose from! There's triangles and sousaphones! There's guitars and harpsichords! Bagpipes and cellos and trombones! How can he find the one that is just right for him out of all those options? Haynes manuals are written specifically for the do-it-yourselfer, yet are complete enough to be used by professional mechanics. Since 1960 Haynes has produced manuals written from hands-on experience based on a vehicle teardown with hundreds of photos and illustrations, making Haynes the world leader in automotive repair information. Covers Chevy S-10 and GMC Sonoma pickups (1994-2004), Blazer and Jimmy (1995-2004), GMC Envoy (1998-2001), and Oldsmobile Bravada & Isuzu Hombre (1996-2001). First published in 1989 as Tuning New Generation Engines, this best-selling book has been fully updated to include the latest developments in four-stroke engine technology in the era of pollution controls, unleaded and low-lead petrol, and electronic management systems. It explains in non-technical language how modern engines can be modified for road and club competition use, with the emphasis on power and economy, and how electronic management systems and emission controls work.
