**Minimalist Wilderness Rigging is the third volume of 'A Practitioner's Study' series. This book is a continuation of the first two volumes - 'About Rope Rescue Rigging' and 'Insights Into**

**Confined Space Rescue'. The primary focus of this book is the wilderness environment and the advanced rigging skills needed to attempt a rescue in this harsh domain. Wilderness rigging specific to rope rescue has always been the ancestor to what we might consider today as modern NFPA driven fire/rescue rope rigging. How ironic that we go back to many of those ancestral rigging roots to address new modern-day rescue challenges - most notably, REMS (Rapid Extraction Module Support) designed as a command component for rescuing wildland firefighters and the time honored traditions of wilderness search and rescue teams. The common thread with all aspects of wilderness rescue is that there's usually not an abundance of immediate advanced medical and rescue support. As such, standard fire/rescue rope rescue equipment will most likely not be available. These challenging factors mandate that the limited few rescuers attempting a wilderness rope rescue need to be at the top of their game when it comes to minimalist rigging. Master's Thesis from the year 2020 in the subject Sociology - Miscellaneous, grade: A, Tribhuvan University (Birendra Multiple Campus), course: Sociology, language: English, abstract: Nepal is one of the most vulnerable countries for disaster. In the disaster response and relief actions, different volunteers, government staffs, community rescue workers, NGOs and INGOs as well as local people is necessary. Among them the roles of security forces like Nepal Army, Nepal Police and Nepal APF are also one of the most important ones. They have been performing actions in co-ordination with government and different stakeholders. Their works has been documented to lesser extent due to lack of access to public or various other reasons. Although the works of Nepal Army and Nepal Police has been found studied and documented, Nepal APF as the youngest security organization of Nepal Government has not been studied. There is lack of literature regarding the topic. So this topic was chosen for the study. This research has three research questions based on the**

**objectives of the study. The first question was aimed to understand and analyze disaster management programs and relief practices of Nepal APF. The second question was aimed to examine the trends and ways how Nepal APF practices disaster preparedness. Similarly, third question was aimed to understand the process of rescue and relief practices of Nepal APF. The study had helped to find out the answers of following questions: What are the disaster preparedness and relief programs/practices of Nepal APF? In what ways Nepal APF is practicing post disaster rescue operations? How does Nepal APF operate relief programs after a disaster? In the event of large crises (earthquakes, typhoons, floods, ...), a primordial task of the fire and rescue services is the search for human survivors on the incident site. This is a complex and dangerous task, which - too often - leads to loss of lives among the human crisis managers themselves. This book explains how unmanned search can be added to the toolkit of the search and rescue workers, offering a valuable tool to save human lives and to speed up the search and rescue process. The introduction of robotic tools in the world of search and rescue is not straightforward, due to the fact that the search and rescue context is extremely technology-unfriendly, meaning that very robust solutions, which can be deployed extremely quickly, are required. Multiple research projects across the world are tackling this problem and in this book, a special focus is placed on showcasing the results of the European Union ICARUS project on this subject. The ICARUS project proposes to equip first responders with a comprehensive and integrated set of unmanned search and rescue tools, to increase the situational awareness of human crisis managers, so that more work can be done in a shorter amount of time. The ICARUS tools consist of assistive unmanned air, ground, and sea vehicles, equipped with victim-detection sensors. The unmanned vehicles collaborate as a coordinated team, communicating via ad hoc cognitive radio networking. To ensure optimal human-robot collaboration, these**

**tools are seamlessly integrated into the command and control equipment of the human crisis managers and a set of training and support tools is provided to them in order to learn to use the ICARUS system. The research leading to these results has received funding from the European Community's Seventh Framework Programme (FP7/2007-2013) under grant agreement number 285417. The publishing of this book was funded by the EC FP7 Post-Grant Open Access Pilot programme. A Practitioner's Study: About Rope Rescue represents best practices in the rope rescue trade as seen through the eyes of international instructor - Pat Rhodes. This book includes three major sections; Management Level of Rope Rescue; Operations Level Rigging; and Technician Level Rigging. Reliable and applicable rigging physics is a central theme throughout this book. In the Management Level many factors are addressed that contribute to the success of a rope rescue incident and to the sustainable growth of a rescue program. The Operations Level looks at the nuts and bolts of rigging including: a robust chapter on knot craft; extensive anchor aptitude development, comprehensive treatment of belay systems and the many devices and techniques associated with belaying; Mainline issues associated with lowering and raising system; new and refreshing litter configurations; and vertical mobility. The Technician Level digs into the the reasons behind the actions, plus, the exploration of more advance techniques as seen in various highline systems, and mid-wall pick-offs. In this section the reader will find a detailed presentation of rigging physics, including vector analysis, friction basics, compression/tension, and torque. From the apprentice to the journeyman rescuer; highly beneficial rigging knowledge for all levels of expertise is available in this book. Meet Ranger! He's a time-traveling golden retriever who has a nose for trouble . . . and always saves the day! Ranger has been trained as a search-and-rescue dog, but can't officially pass the test because he's always getting distracted by squirrels during exercises.**

**One day, he finds a mysterious first aid kit in the garden and is transported to the year 1850, where he meets a young boy named Sam Abbott. Sam's family is migrating west on the Oregon Trail, and soon after Ranger arrives he helps the boy save his little sister. Ranger thinks his job is done, but the Oregon Trail can be dangerous, and the Abbotts need Ranger's help more than they realize! Based on a real-life partnership, this heartening story of the love and teamwork between a girl and her service dog is sure to illuminate and inspire. An endnote from the authors tells more about the training and extraordinary abilities of service dogs. Full color. A comprehensive, authoritative, and accessible reference for disaster robotics that covers theory, specific deployments, and ground, air, and marine modalities. This book offers the definitive guide to the theory and practice of disaster robotics. It can serve as an introduction for researchers and technologists, a reference for emergency managers, and a textbook in field robotics. Written by a pioneering researcher in the field who has herself participated in fifteen deployments of robots in disaster response and recovery, the book covers theory and practice, the history of the field, and specific missions. After a broad overview of rescue robotics in the context of emergency informatics, the book provides a chronological summary and formal analysis of the thirty-four documented deployments of robots to disasters that include the 2001 collapse of the World Trade Center, Hurricane Katrina, the 2010 Haiti earthquake, the Deepwater Horizon oil spill, the 2011 Japanese earthquake and tsunami, and numerous mining accidents. It then examines disaster robotics in the typical robot modalities of ground, air, and marine, addressing such topics as robot types, missions and tasks, and selection heuristics for each modality. Finally, the book discusses types of fieldwork, providing practical advice on matters that include collecting data and collaborating with emergency professionals. The field of disaster robotics has lacked a comprehensive overview. This**

book by a leader in the field, offering a unique combination of the theoretical and the practical, fills the gap. "This book uses interview data from public officials tasked with planning and executing preparation and response to natural disasters to analyze how pets, livestock, and other companion animals complicate disaster preparedness. Because many families view animal welfare as a priority, evacuation and sheltering preparations and responses must account for animals"-- Henrietta Szold took Queen Esther as a model and worked hard to save the Jewish people. In 1912, she founded the Jewish women's social justice organization, Hadassah. Henrietta started Hadassah determined to offer emergency medical care to mothers and children in Palestine. When WWII broke out, she rescued Jewish children from the Holocaust, and broadened Hadassah's mission to include education, youth development, and women's rights. Hadassah offers free help to all who need it and continues its mission to this day. Symptom control, management of psychosocial and spiritual concerns, decision-making consistent with values and goals, and care of the imminently dying that is appropriate and sensitive are among the critical issues in palliative care. This book explores progress made and future goals. If you are planning to take your Rescue Diver course in a few weeks, then you need a study guide that will help you prepare for your certification and get ready for the next stage in your diving career. This Rescue Diver Guide will help you prepare and includes skills needed to pass the course, tips from an experienced instructor, updates for COVID and 100 practise questions. Our writing team includes an experienced PADI Diving Instructor and our study guide features 100 practise questions and answers. A fascinating and unprecedented ethnography of animal sanctuaries in the United States In the past three decades, animal rights advocates have established everything from elephant sanctuaries in Africa to shelters that rehabilitate animals used in medical testing, to homes for farmed animals,

abandoned pets, and entertainment animals that have outlived their “usefulness.” *Saving Animals* is the first major ethnography to focus on the ethical issues animating the establishment of such places, where animals who have been mistreated or destined for slaughter are allowed to live out their lives simply being animals. Based on fieldwork at animal rescue facilities across the United States, Elan Abrell asks what “saving,” “caring for,” and “sanctuary” actually mean. He considers sanctuaries as laboratories where caregivers conceive and implement new models of caring for and relating to animals. He explores the ethical decision making around sanctuary efforts to unmake property-based human–animal relations by creating spaces in which humans interact with animals as autonomous subjects. *Saving Animals* illustrates how caregivers and animals respond by cocreating new human–animal ecologies adapted to the material and social conditions of the Anthropocene. Bridging anthropology with animal studies and political philosophy, *Saving Animals* asks us to imagine less harmful modes of existence in a troubled world where both animals and humans seek sanctuary.

Torn between love and duty--the betrayal of a sacred vow follows one woman scorned to the ends of the Earth in search of peace, promise, and purpose. For Ovidia has much to do as a member of the Paranormal Research and Rescue Institute. Having lost her fiance to the duty of his crown, she is struck to find him not only back in her life but her partner on a dangerous mission. Now centuries in the past in 1718, Ovidia must set aside her feelings and the lingering sting of betrayal in order to track down a missing siren and return her to a mysterious and ancient island that few have found--or lived to tell the tale. Even with the odd companionship of pirates around her, Ovidia finds Erik to be the one she trusts the least--no matter how her heart aches for him. With danger on the horizon, Ovidia sets sail for the adventure of a lifetime--one that will challenge her mind and her heart, as she fights to navigate the churning seas ahead and

follow her inner compass wherever it may lead. "A scholarly examination of the problems facing the small boat crews of the twenty-first century, who are just as heroic as their predecessors, is long overdue. Noble allows the people who operate America's modern small rescue platforms to tell their own story. Lives were lost in a scenario that could have been prevented; why should we not ask the tough questions?"--John J. Galluzzo, Scituate Historical Society

This on-the-spot narrative of the February 1997 loss of three U.S. Coast Guardsmen from the Quillayute River Station during a maritime rescue is both a commemoration and a report of the failure of the Coast Guard's senior leadership to appreciate and support the work of enlisted men and women at often remote and dangerous small-boat stations. The first in-depth look at a small-boat maritime rescue by the U.S. Coast Guard, this book is also the first to describe the role of those at small-boat rescue stations and of the policy setters at Coast Guard headquarters in Washington, D.C. Its author was in the right place at the right time on a night when everything went wrong. From the first alarm to the dramatic helicopter rescue of the crew of a foundering sailboat, from the onshore rescue of the sole survivor of the first dispatched Coast Guard crew to the tragic losses, this man-against-the-sea tale is told largely in the words of the participants and others who were with author Dennis Noble at the station near La Push, Washington, on the night the tragedy unfolded. Noble also provides an analysis of the state of the Coast Guard, how its current problems have developed, and what effect they have on the service's operations. As the story unfolds, the views of senior enlisted personnel at the station paint a picture of an overworked small-boat rescue force and their feelings toward what they perceive as a distant, and in many cases unaware, officer corps. Noble contrasts these perspectives with those voiced by the investigating commissioned officers and higher-ups at Coast Guard headquarters. Illustrated with 29 photos and maps, Noble's contribution to the

**annals of maritime history is a riveting account of extraordinary heroism in the face of regrettable human tragedy. Historian Dennis L. Noble served in the U.S. Coast Guard for 21 years. This issue of Thoracic Surgery Clinics, guest edited by Dr. Felix Fernandez, is devoted to Quality in Thoracic Surgery. Dr. Fernandez has assembled expert authors to review the following topics: Risk adjustment and performance measurement for lung cancer resection; Risk adjustment and performance measurement for esophageal cancer resection; Oncologic quality indicators in thoracic surgery; National Quality Forum metrics for thoracic surgery; Volume outcome relationships in thoracic surgery; Failure to rescue in thoracic surgery; Quality and cost in thoracic surgery; Patient reported outcomes in thoracic surgery; Database audit in thoracic surgery; European Society of Thoracic Surgeons risk score; International database collaboration in thoracic surgery; Hospital readmissions following thoracic surgery; and more! The first adventure of this NEW YORK TIMES best-selling porcine wonder is now available as an e-book. (Ages 6 - 8) Features an audio read-along! To Mr. and Mrs. Watson, Mercy is not just a pig – she's a porcine wonder. And to the portly and good-natured Mercy, the Watsons are an excellent source of buttered toast, not to mention that buttery-toasty feeling she gets when she snuggles into bed with them. This is not, however, so good for the Watsons' bed. BOOM! CRACK! As the bed and its occupants slowly sink through the floor, Mercy escapes in a flash – "to alert the fire department," her owners assure themselves. But could Mercy possibly have another emergency in mind – like a sudden craving for their neighbors' sugar cookies? Welcome to the wry and endearing world of Mercy Watson – an ebullient new character for early chapter-book readers in a series that's destined to be a classic. There are numerous high quality training manuals on the market today that address the typical OSHA driven requirements for confined space rescue. It was never my**

intent to write an additional one. This book is simply my sharing of perceptions on a few confined space considerations that I have personally encountered during my career of rescue work in and around the confined space environment. It should also be noted that this book is an extension of my previous book *A Practitioner's Study About Rope Rescue Rigging*. I have included some direct rigging information from the *Practitioner's Study About Rope Rescue Rigging*, and in a few instances, such as the sections addressing knot craft and highlines, I have added changes and/or improvements to the rigging practices that are directly taken from the *Practitioner's Study*. My prime central belief in the confined space realm is; never become complacent. Confined space work must be researched, calculated and absolutely accountable. Ultimately, I would say my most important central foundation in this world of rescue is...study and practice daily, as much as possible, ongoing and never ending. These considerations are the driving force behind this book. It would be foolhardy for me to attempt a publication that claims to have all the answers for confined space rescue. However, I can share with you some of my personal experiences, favorite knots and evolving rigging concepts in hopes that you may find some bit of information that you can use and possibly add to your bag-of-tricks.-Pat Rhodes-

*Technical Rescue Operations, Volume II: Common Emergencies* is the second in a three-volume series by Larry Collins. Volume II covers responding to, managing, and conducting rescues in the “daily” setting of fire/rescue agencies. This includes the kind of technical rescues that confront firefighters and rescuers on practically a daily basis. This volume also explains how to handle more complex and large-scale rescue operations that challenge responders to apply solid rescue principals for longer periods of time, with the assistance required of additional resources and under more strict command and control because of the scope of the incident, its newsworthiness, crowds of people arriving on the scene, and getting

the immediate attention of local or regional elected officials. Features & Benefits: Learn from the author's repeated "once in a career" incidents that are commonplace for busy fire/rescue units such as the L.A. County Fire Department's USAR task force/USAR Company Maximize the base of knowledge developed by leading international rescuers and fire/rescue agencies, taught by a current practitioner assigned as an officer of one of the most experienced and battle-hardened fire department rescue units in the nation Contains "best practices" from fire/rescue agencies from around the world, showing how technical rescues and disasters can be managed better, faster, and safer Technical Rescue Operations, Volume II: Common Emergencies is the second in a three-volume series by Larry Collins. Volume II covers responding to, managing, and conducting rescues in the "daily" setting of fire/rescue agencies. This includes the kind of technical rescues that confront firefighters and rescuers on practically a daily basis. This volume also explains how to handle more complex and large-scale rescue operations that challenge responders to apply solid rescue principals for longer periods of time, with the assistance required of additional resources and under more strict command and control because of the scope of the incident, its newsworthiness, crowds of people arriving on the scene, and getting the immediate attention of local or regional elected officials. from harm's way is an American tradition and one of the nation's highest priorities during conflict. The Air Force maintains a fleet of HH-60G helicopters and HC-130P aircraft along with a contingent of pararescue specialists dedicated to the recovery of personnel isolated on the battlefield. The traditional training, organizing, and equipping focus of this force is the recovery of downed aircrews. This focus stems from doctrine that draws from lessons learned in past contingencies, particularly the Vietnam War, where the Air Force experienced a large number of downed aircrew incidents. A robust capability dedicated exclusively to the combat search and rescue mission area was essential to ensure every effort was made to safely recover and return our aircrews to fight again. While maintaining the capability to recover our aircrews remains sacrosanct for the Air Force, Colonel dePalo argues in this study that the capability exists to go beyond dedicating these forces exclusively to the combat search and rescue mission. The United States' ability to quickly and decisively win a major combat operation creates a situation where we can expect to operate more often in diverse and complex nonlinear battlespace, particularly in the long-term global war on terrorism (GWOT). The changing nature of the battlespace creates an environment much different from traditional combat operations where the Air Force's at-risk population primarily consisted of combat aircrews. The study draws from Colonel dePalo's extensive experience supporting combat rescue operations in the GWOT to demonstrate that the missions flown by USAF combat rescue crews in the GWOT are far different from the traditional rescue of aircrews behind enemy lines seen in more conventional conflicts. In fact, he points out that the Air Force assets have flown missions almost exclusively in support of other components' requirements since air component downed aircrew incidents are virtually nonexistent. Colonel dePalo challenges theater planners to reevaluate the effectiveness of keeping a capable force tied exclusively to a rarely

executed mission when their combat power could be used to support other joint force commander objectives in addition to providing combat rescue support. This timely Handbook is based on the principle that disasters are social constructions and focuses on social science disaster research. It provides an interdisciplinary approach to disasters with theoretical, methodological, and practical applications. Attention is given to conceptual issues dealing with the concept "disaster" and to methodological issues relating to research on disasters. These include Geographic Information Systems as a useful research tool and its implications for future research. This seminal work is the first interdisciplinary collection of disaster research as it stands now while outlining how the field will continue to grow. Initial priorities for U.S. participation in the International Decade for Natural Disaster Reduction, declared by the United Nations, are contained in this volume. It focuses on seven issues: hazard and risk assessment; awareness and education; mitigation; preparedness for emergency response; recovery and reconstruction; prediction and warning; learning from disasters; and U.S. participation internationally. The committee presents its philosophy of calls for broad public and private participation to reduce the toll of disasters. Written by outstanding authorities from all over the world, this comprehensive new textbook on pediatric and neonatal ventilation puts the focus on the effective delivery of respiratory support to children, infants and newborns. In the early chapters, developmental issues concerning the respiratory system are considered, physiological and mechanical principles are introduced and airway management and conventional and alternative ventilation techniques are discussed. Thereafter, the rational use of mechanical ventilation in various pediatric and neonatal pathologies is explained, with the emphasis on a practical step-by-step approach. Respiratory monitoring and safety issues in ventilated patients are considered in detail, and many other topics of interest to the bedside clinician are

covered, including the ethics of withdrawal of respiratory support and educational issues. Throughout, the text is complemented by numerous illustrations and key information is clearly summarized in tables and lists. In *The Coming Rescue*, God's people are enslaved once again, having forsaken the true God for idols made by human hands. But even though they run from Him, God continues to pursue them. In this volume, groups will learn how God pursued His people with a promise--the rescue from their captivity to sin, and the coming of their Redeemer. *Gospel Foundations: From the creators of The Gospel Project*, this six-volume study leads students on a journey through the Bible in just one year. Each volume contains seven sessions and is video-enhanced to help your group engage in discussion with a clear understanding of how each text fits into the storyline of Scripture.

This qualitative descriptive study explored whether failure to rescue (FTR) was present in long term care (LTC) and resulted in a description of the phenomena as it exists in that setting. An additional outcome was a description of factors that help or hinder nurses in LTC in keeping their residents safe from harm caused by medical mistakes. FTR is defined as the failure of a clinician to provide surveillance, detect a signal and take action in order to prevent a medical mistake that leads to harm. Focus groups and interviews were conducted to gather data. Thirty-one participants consisting of registered nurses, licensed practical nurses, and certified nursing assistants were included in the sample. The participants were located in five skilled nursing facilities in the Midwest. A model of FTR was used to assist participants in understanding and talking about the FTR process. Three themes emerged from the data: (a) I know my residents, (b) I can't get help, and (c) the end of life is complicated. The implications of this study are: (a) FTR is not limited to acute care settings (b) nurses express feelings of moral distress while working in LTC, and (c) communication between nurses in LTC and outside providers is of

concern. Further research is suggested on: (a) comparing urban LTC settings with rural LTC settings, (b) moral distress in LTC, (c) the use of the FTR model in nursing education and (d) communication between emergency medical technicians and emergency department staff.

**A Practitioner's Study: About Rope Rescue Rigging - Second Edition** - This book is written as a study for practicing rope access and rescue technicians. This is not an entry level manual. For those of you who are thinking about entering the technical rescue field there are an endless number of high-quality instruction manuals on the market. Having said this, any book about rope rescue is merely a reference and should only be used by an apprentice in conjunction with a quality school of rescue and under the guidance of a seasoned lead instructor. The First Edition of this book was published in 2013. During these past seven years I have substantially modified and evolved my own rope access and rigging practices. To this point, I felt the need to publish this Second Edition to better reflect my current views on rescue rigging. Additionally, I have received numerous suggestions from those of you who purchased the First Edition. For this I am truly grateful, and I've tried to reflect these suggestions in this latest publication. The fact is that shared research and development is the most important aspect of our worldwide rescue community. Hopefully this book finds a place of positive influence within this time-honored trade of rope access and rescue. Thank you for your participation and support!

**Pat Rhodes** The purpose of this book is to focus on the underlying personal and behavioral factors involved in search and rescue including the subjects of a search and rescue mission, the search and rescue unit members participating in an operation, the search and rescue command staff preparing for and responding to an event, and the community at large before, during, and after a search and rescue activity. During the Progressive Era, a period of unprecedented ingenuity, women evangelists built the old time religion with brick and mortar, uniforms and automobiles, fresh

converts and devoted protégés. Across America, entrepreneurial women founded churches, denominations, religious training schools, rescue homes, rescue missions, and evangelistic organizations. Until now, these intrepid women have gone largely unnoticed, though their collective yet unchoreographed decision to build institutions in the service of evangelism marked a seismic shift in American Christianity. In this ground-breaking study, Priscilla Pope-Levison dusts off the unpublished letters, diaries, sermons, and yearbooks of these pioneers to share their personal tribulations and public achievements. The effect is staggering. With an uncanny eye for essential details and a knack for historical nuance, Pope-Levison breathes life into not just one or two of these women—but two dozen. The evangelistic empire of Aimee Semple McPherson represents the pinnacle of this shift from itinerancy to institution building. Her name remains legendary. Yet she built her institutions on the foundation of the work of women evangelists who preceded her. Their stories—untold until now—reveal the cunning and strength of women who forged a path for every generation, including our own, to follow. Priscilla Pope-Levison is Professor of Theology and Assistant Director of Women's Studies at Seattle Pacific University. Her previous books include *Sex, Gender, and Christianity*; *Turn the Pulpit Loose: Two Centuries of American Women Evangelists*; *Return to Babel: Global Perspectives on the Bible*; *Jesus in Global Contexts*; and *Evangelization in a Liberation Perspective*. The Oklahoma City bombing, intentional crashing of airliners on September 11, 2001, and anthrax attacks in the fall of 2001 have made Americans acutely aware of the impacts of terrorism. These events and continued threats of terrorism have raised questions about the impact on the psychological health of the nation and how well the public health infrastructure is able to meet the psychological needs that will likely result. *Preparing for the Psychological Consequences of Terrorism* highlights some of the critical issues in

responding to the psychological needs that result from terrorism and provides possible options for intervention. The committee offers an example for a public health strategy that may serve as a base from which plans to prevent and respond to the psychological consequences of a variety of terrorism events can be formulated. The report includes recommendations for the training and education of service providers, ensuring appropriate guidelines for the protection of service providers, and developing public health surveillance for preevent, event, and postevent factors related to psychological consequences. “A touching tale.” —Kirkus Reviews

The heartwarming true story of a blind horse named Joey. At the height of his show career, this beautiful Appaloosa’s majestic stature, strength, and willingness to work made him the perfect partner. But when an injury cost Joey his show career, he moved from one owner to the next, ultimately experiencing severe abuse and neglect. A rescue group found Joey nearly dead from starvation—and blind. Then he came to Hope Reins—a ranch dedicated to helping hurting kids who had been abused, emotionally wounded, or unwanted. By teaching these children to care for rescued animals, the Hope Reins staff were convinced they could reach kids with love and hope and show them that we are never forgotten by God. But could the financially struggling ranch afford to take care of a blind horse that no one else wanted? Could Joey somehow learn to trust people even though the world had hurt him so badly? And what would happen—to Joey, the kids, and Hope Reins—if they failed? A true story of friendship destined to become a classic, Joey will touch your heart and reveal the power of finding light in the darkness. This thesis examines the application of battle command during the 100/442d Regimental Combat Team’s rescue of the First Battalion, 141st Infantry Regiment, 36th Infantry Division, the “Lost Battalion.” As background, this study presents a brief history of the Japanese in Hawaii and the United States, of the formation and record of the

**100/442d RCT, and of the battle to rescue the Lost Battalion. The contemporary concept of battle command is defined as per Army Field Manual 3-0, Operations (June 2001) and Field Manual 22-100, Leadership; Be, Know, Do (August 1999) and shown to encompass the World War II-era concepts of command and leadership. This study examines how the tenets of battle command-visualize, describe, direct-were applied by the 36th Division and the 100/442d RCT during the operation. Specific examples from the battle will illustrate both the use and neglect of the precepts of battle command and illustrate the importance of sound command and leadership techniques as well as the value of unit cohesion in present-day operations. This study of the rescue motif in popular American novels before World War I focuses on the rescue convention as part of the romantic plot of the novels. The rescue as a structured convention that controls the movement of the romantic plot appears in all types of domestic novels, gothics, dime novels, historical romances, and westerns. This book provides practical, up-to-date information on training, team management, equipment, and techniques for ice rescue teams. How American labor leaders came to the rescue of political and Jewish victims of Nazi persecution. This generation is struggling—mostly alone. Fear and pain are everywhere. And yet most of us, especially men, forget or forgot what’s available and intended to help us survive and even thrive in these evil days: authentic Christian community. In Rescue, Justin Camp reminds guys that God put his Spirit into their hearts so they would come out of isolation to support and sacrifice for one another. This third book in the life-changing WiRE series explores: Why the myth persists that “real” men don’t need each other How vulnerability is the only path to becoming hearty, rugged, good men Practical wisdom for starting worthwhile spiritual communities Scattered, men are assailable. United with brothers and God, though, they’re protected—ready for anything this world might threaten. Your**

**Definitive High Angle Rope Rescue Guide!** The fourth edition of **High-Angle Rope Rescue Techniques: Levels I & II** provides comprehensive coverage of all aspects of high-angle rescue, including planning, PPE and equipment, medical considerations, evacuations, and special rescue operations. Based on the 2013 edition of NFPA 1006, Standard for Technical Rescuer Professional Qualifications, **High-Angle Rope Rescue Techniques: Levels I & II** provides a broad overview of all rescue techniques to meet the needs of fire service, search and rescue, and many other rope rescue professionals. The fourth edition has been updated to include: Coverage of new protective equipment, terminology, rescue products, and techniques. All new Skill Drills that provide step-by-step instruction on how to execute important skills and procedures. Separation of High-Angle Rope Rescue I and II Level content throughout the textbook and instructor resources. **Fire Service Technical Search and Rescue, 8th Edition** is a primary training text for Level I Rescuers according to NFPA® 1006. The manual presents the knowledge and skills for fire service search and technical rescue for Level I Rescuers to safely and effectively conduct Operations-level rescues as defined in NFPA® 1006. The book also supports the corresponding chapters of NFPA® 1670, Standard on Operations and Training for Technical Search and Rescue Incidents (2014 Edition). According to NFPA® 1670, an Operations Level Rescuer is able to participate in more complex search and rescue incidents under the supervision of a Rescue Technician. This NEW training manual focuses on Operations-level situations most common for firefighters and rescue squad members. Technician-level information has been included to provide Operations-level fire/rescue personnel with the background information needed to effectively support complex technical rescue operations. A firefighter or rescue squad member will find the knowledge and skills in this manual, to safely and effectively perform basic search and rescue operations under appropriate supervision.

**Curriculum USB Flash Drive is now available. This customizable curriculum includes lesson plans for the instructor complete with learning objectives, lesson outlines and assignment sheets. PowerPoint® visuals, skill sheets, quizzes and clip art are also included in the curriculum. On February 18, 1952, off the coast of Cape Cod, a fierce nor'easter snapped in half two 503-foot oil tankers, the Pendleton and the Fort Mercer. Human grace and grit, leadership and endurance prevail as Theresa Mitchell Barbo and Captain W. Russell Webster (Ret.) recount the historic, heroic rescue of thirty-two merchant mariners from the sinking Pendleton by four young Coast Guardsmen aboard the 36-foot motor lifeboat CG36500. A foreword by former Commandant Admiral Thad Allen (Ret.) and an essay by Master Chief John "Jack" Downey (Ret.), a veteran of thousands of modern-day small boat rescues, round out the special third edition of this classic work on Coast Guard history.**
