Like its predecessors, Volume III of the *Handbook for Teaching Introductory Psychology* provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from *Teaching of Psychology (TOP)*, the official journal of the Society for the Teaching of Psychology, Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, "Issues and Approaches in Teaching Introductory Psychology," contains 52 articles on critical issues, such as: how to approach the course; understanding students' interests, perceptions, and motives; students' existing knowledge of psychology (including their misconceptions); a comparison of introductory textbooks and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory, as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology. This short text is designed to present those aspects of the behavioral sciences that are clinically relevant to physicians in all branches of medicine. It should also be helpful to medical students studying for the behavioral sciences section of Part 1 of the national boards, to physicians taking the behavioral sciences portion of the FLEX exam, and to psychiatrists preparing for their American Board of Psychiatry certifying exam. Behavior is a product of brain function and is manifested by actions in response to stimuli. It is fundamental to the maintenance of health, and plays a role in causing and intensifying many illnesses. Abnormal behaviors can reveal to us, and even allow us to localize, brain dysfunction and disease. And they can cause, for patients, their families, and friends, considerable suffering. On an intellectual level, trying to comprehend the behavior of our patients (and our own behavior as well), contributes to making medicine a truly intriguing profession.
