On the life and achievements of Sunita Williams, b. 1965; originally written in Hindi. Title first published in 2003. Despite all the hype about e-learning, the real breakthrough in technology, at least as far as HR goes, is in the development of the corporate intranet for people management purposes. Bryan Hopkins and James Markham's book explains the potential for intranets in every aspect of HR:

personnel administration, performance management, employee development, communication and knowledge management, as well as training and e-learning. It asks and answers the key questions you need to ask yourself and provides case studies illustrating how organizations have successfully exploited their intranet to help their people work more effectively and efficiently. HR managers are under pressure to cut costs, increase the effectiveness and range of the services they deliver. In many organizations there is also considerable pressure to maximise the

returns on investment in technology. This book provides you with the means to achieve all of these goals. On the life and works of Dhirubhai Ambani, 1932-2002, founder of Reliance group of industries. The TDS technique is a practical, easy, and powerful tool for well test interpretation. It uses characteristic features and points found on the pressure derivative versus time plot, so that reservoir parameters can be easily calculated by using several analytic expressions. Most calculations can be verified more than

once and applied to systems where the conventional straight-line method has no applications. This book deals with well tests run in elongated systems, partially completed/penetrated wells, multirate tests, hydraulically fractured wells, interference tests, and naturally fractured reservoirs. This technique is used in all commercial well-testing software. Its use is the panacea for well test interpretation and can also be extended to rate-transient analysis, although not shown here. This cutting-

edge Handbook offers a comprehensive introduction to the emerging research field of artificial intelligence (AI) in human resource management (HRM). Broadly mapping AI fields relevant for HR, it not only considers the more well-known areas of machine learning and natural language processing, but also lesser-known fields such as affective computing and robotic process automation. "Current welding literature" included in each volume.
